

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at line 9 through line 16 of page 9, as follows:

It can be seen from Figures 12 and 13, that the body (36) also includes a pivotable sole plate (48). The sole plate (48) is pivotable about pivot point (50). The pivot point (50) includes a means (now shown) for allowing the sole plate (48) to be held at any one of a desired position around the range of possible pivotable positions about the point (50). In the example of Figure 12, the sole plate (48) is tucked underneath the body (36). In the example of Figure 13, the sole plate (48) is pivoted through 270° so as to act as a guide sole plate for a conventional jigsaw. In this mode, the blade (12') passes through an aperture 47 in the sole plate (48) when used in its jigsaw mode. Also, the working surface 52 passes through the aperture 47 which is better shown in Applicant's U.S. Patent D.455,624S, the specification and drawings of which are expressly incorporated by reference.
